Eco-friendly pavers

Permapave Permeable Pavers are natural stone pavers that eliminate 100% of gross pollutants from waterways.

With a flow through rate of up to 1½ gallons per second per square foot, the pavers maximize land use by making previously impervious areas pervious. In addition, use of the pavers can be applied toward LEED credits. Permapave Industries LLC. 516-584-2110. www.permapavelc.com. Circle 6.
